28th April, 1893.

The POPULATION of the UNITED KINGDOM in the middle of 1893 is estimated, on the basis of the recent enumerations, at 38,429,992 persons; that of England and Wales at 29,729,506, of Scotland at 4,093,959, and of Ireland at 4,606,527.

In the United Kingdom 289,755 *births* and 188,382 *deaths* were registered in the three months ending 31st March 1893. The natural increase of population was, therefore, 101,373. The registered number of persons married in the quarter ending 31st December 1892 was 156,608.

The birth-rate in the United Kingdom in the first quarter of 1893 was 30·5 and the death-rate 19·9 per 1000. The marriage-rate in the fourth quarter of 1892 was 16·3 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2108 registration sub-districts of England and Wales during the quarter ending 31st March 1893; and the MARRIAGES in 15,100 churches or chapels, in 11,004 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ending 31st December 1892.

Marriages.

During the fourth quarter of 1892 the marriages of 132,070 persons were registered in England and Wales, giving an annual rate of 17·8 per 1000 of the estimated population, which is 0·3 per 1000 above the mean rate in the ten preceding fourth quarters. In registration counties the lowest rates were 13·2 in Middlesex, and 14·2 in Surrey and in Herefordshire; while the highest were 20·6 in Cambridgeshire and in Norfolk, and 21·0 in Suffolk. In London the rate was 19·3.

Births.

The births registered in the first quarter of 1893 numbered 231,289, being in the proportion of 31·5 annually per 1000 living. This exceeds the rates in the first quarters of 1889 and 1892, which were 31·4 and 30·0 respectively, but with these exceptions it is the lowest rate in the corresponding period of any year since 1838; compared with the average in the ten next preceding first quarters, it shows a deficiency of 1·1 per 1000. In registration counties the rates ranged from 25·1 in Rutlandshire, 25·3 in Huntingdonshire, 26·2 in Sussex, and 26·3 in Surrey, to 34·7 in Northumberland, 35·7 in South Wales, 36·5 in Durham, 37·5 in Staffordshire, and 37·3 in Monmouthshire.

In the thirty-three great towns the birth-rate was 33·2 per 1000. The lowest rates were 23·8 in Halifax, 24·6 in Huddersfield, and 26·6 in Croydon; while the highest were 37·2 in Cardiff, 27·3 in Liverpool, 39·0 in West Ham, and 39·3 in Gateshead. In sixty-seven other large town districts the birth-rate was 32·8, while in the remainder of the country it was 30·0 per 1000.

Excess of Births over Deaths, and Emigration.

The *natural increase* of the population of England and Wales, or the excess of births over deaths, which had amounted to 60,322, 71,146, and 37,369 in the first quarters of 1890, 1891, and 1892, was 86,663 last quarter.

It appears from returns issued by the Board of Trade that 58,630 emigrants embarked during the quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing proportionally 915 whose nationality was not distinguished, the emigrants of native origin numbered 40,003, and of these 26,152 were English, 4,325 Scotch, and 9,526 Irish, while those of foreign origin numbered 18,627. The proportions to a million of the estimated population in the several portions of the United Kingdom were 880 from England, 1,056 from Scotland, and 2,068 from Ireland. Compared with the averages in the first quarters of the next preceding three years, the proportion of emigrants from England showed an increase of 8 per cent., that from Scotland an increase of 25 per cent., and that from Ireland an increase of 63 per cent.

Prices and Pauperism.

During the first quarter of the year the average price of wheat was 25*s.* 7*d.* per quarter, the prices in the preceding two quarters having been 29*s.* 3*d.* and 27*s.* 5*d.* respectively. The mean wholesale prices of beef and mutton in the London market were $5\frac{3}{8}$*d.* and $6\frac{7}{8}$*d.* per lb. respectively; compared with the prices in the preceding quarter the price of beef showed a decrease of $\frac{1}{8}$*d.*, and that of mutton an increase of $\frac{3}{8}$*d.* per lb. The average price of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 15*s.* 10*d.* per ton, against 19*s.* 5*d.* and 19*s.* 0*d.* in the first quarters of 1891 and 1892. The mean price of $2\frac{3}{4}$*l.* per cent. Consols was 98*l.* 6*s.* 5*d.*, against 96*l.* 16*s.* 8*d.* in the third quarter of 1892. The minimum annual rate per cent. of discount charged at the Bank of England, which had been raised from 2*l.* to 3*l.* on 20th October 1892, was reduced on 26th January to 2*l.* 10*s.* The average minimum rate charged during the quarter was 2*l.* 12*s.* 10*d.* per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 710,670, of whom 196,497 received in-door, and 514,173 out-door relief. The proportion of the population in receipt of Poor-law relief was 23·9 per 1000, against 24·1 and 23·7 in the first quarters of 1891 and 1892.*

* The average number of paupers relieved on the last day of each week in the fourth quarter of 1892 (the figures relating to which were received too late for publication in the last quarterly return) was 665,610, or 22·6 per 1000 of the population; and of these, 186,627 received in-door and 478,983 out-door relief.

Meteorology.

Remarks on the meteorology of the quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, furnished by Mr. James Glaisher, F.R.S., will be found, with accompanying Tables, on pages 65–72. The mean reading of the barometer was 29·797 inches, being ·025 of an inch above the mean reading in the first quarters of 52 years; the mean reading was above its average in January and in March, but below in February. The mean temperature of the air during the quarter was 40°·9, being 2°·1 above the average in the first quarters of 122 years; the temperature was 1°·2 below the average in January, 2°·3 above in February, and 5°·2 above in March. The weather was cold from the beginning of the year to the 18th January, the mean deficiency at Blackheath during these 18 days having been nearly 7°; from 19th January to 21st February it was generally warm, with fogs in the latter part of January and frequent rain in February; it was colder in the last few days of February, but a warm period set in on 1st March, and, with the exception of five days from 17th to 21st, continued till the end of the quarter. At 30 stations of observation the mean temperature during the quarter ranged from 38°·7 at Wolverhampton, 38°·8 at Halifax, and 39°·1 at Somerleyton, to 43°·3 at Torquay and at Barnstaple, 44°·8 at Truro, and 45°·4 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory, Greenwich, was 4·60 inches, being 0·35 of an inch below the average of the first quarters of 78 years. Compared with the respective monthly averages, the rainfall showed a deficiency of 0·41 of an inch in January, and of 1·12 inches in March, and an excess of 1·18 inches in February. At 30 stations of observation the amounts measured in the quarter ranged from 4·19 inches at Hull, 4·25 inches at Nottingham, and 4·31 inches at Cambridge, to 8·32 inches at Torquay, 9·25 inches at Stonyhurst, and 9·89 inches at Bath.

The amount of bright sunshine recorded during the quarter at the Royal Observatory was 219·4 hours, or 24·3 per cent. of the total number of hours the sun was above the horizon, the mean proportion in the ten preceding first quarters having been 17·5 per cent. The amount was below its average in January, and slightly above in February, while in March it exceeded the average by 84 per cent.

Deaths.

The deaths registered during the first quarter of 1893 numbered 144,626, being in the proportion of 19·7 deaths annually per 1000 persons living. This is lower than the rate in any preceding first quarter on record, excepting that of 1884 when the rate was also 19·7, and is 2·3 per 1000 below the mean rate in the first quarters of the ten years 1883–92. In registration counties the rates ranged from 15·2 in Rutlandshire, 15·9 in Middlesex, 16·0 in Westmorland, 16·3 in Huntingdonshire, and 16·6 in Kent and in Essex, to 21·1 in North Wales, 21·7 in London, and 21·9 in Lancashire.

The 144,626 deaths included 73,394 of males and 71,232 of females, the rate of mortality among males being 20·6, and that among females 18·8 per 1000 estimated to be living of each sex. These rates were respectively 2·5 and 2·2 per 1000 below the mean rates in the ten preceding first quarters. Out of equal numbers living, the deaths of males were 110 to 100 deaths of females.

Urban and Rural Mortality.—In the registration districts and sub-districts which are taken to represent approximately the urban portion of the country, and which contain a population estimated at nearly nineteen and a quarter millions, the death-rate last quarter was 20·4 per 1000; while, in the remaining and chiefly rural population of about ten and a half millions, it was 18·4 per 1000. These rates

were respectively 2·2 and 2·5 per 1000 below the mean rates in the ten preceding first quarters. Out of equal numbers living, the deaths in the urban districts were to those in the rural districts in the proportion of 111 to 100, the ratio in the ten preceding first quarters having been 108 to 100.

In the thirty-three great towns, with an aggregate population estimated at about ten and a third millions, the annual death-rate last quarter was 22·0 per 1000, the rates in the several towns ranging from 18·2 in Derby, 18·3 in Huddersfield, and 18·5 in Swansea, to 25·8 in Liverpool, 26·0 in Manchester, and 26·4 in Bolton.

In sixty-seven other large town districts the death-rate was 19·0 per 1000, or 3·0 per 1000 below the rate in the great towns; while in the remainder of England and Wales, after excluding these 100 towns, the rate was 18·3.

Mortality at different Ages.—Of the 144,626 deaths registered last quarter, 31,790 were of infants under one year of age, 67,983 of persons aged between one and 60 years, and 44,853 of persons aged 60 years and upwards.

The mortality of infants under one year of age was in the proportion of 137 deaths to 1000 births registered, being 9 per 1000 below the mean proportion in the ten preceding first quarters. The proportion was only 104 per 1000 births in Kent and in Rutlandshire, and 105 in Bedfordshire, while it reached 156 in Lancashire, 158 in Staffordshire, 160 in Leicestershire, and 165 in South Wales. In the thirty-three great towns the mean proportion was 145 per 1000, ranging from 126 in Bristol, 127 in West Ham, 130 in Brighton, and 131 in London, to 200 in Blackburn and in Halifax, and 203 in Burnley. In sixty-seven other large town districts the infant mortality averaged 142 per 1000 births, the lowest proportions being 79 in Scarborough, 80 in Leyton, 83 in Wallasey, and 88 in Hornsey, and the highest 203 in Middlesbrough, 204 in Chester, 211 in Ystradyfodwg, and 221 in Merthyr Tydfil. In the remainder of the country, after excluding these 100 towns, the infant mortality was 130 per 1000 births registered.

The mortality of persons aged between one and 60 years was at the rate of 10·3 deaths annually per 1000 of the estimated population at these ages, being 1·3 per 1000 below the mean rate in the ten preceding first quarters. In the thirty-three great towns the rate was 12·5 per 1000; the lowest rates being 9·1 in Croydon, 9·5 in Norwich and in Leicester, and 9·6 in Nottingham, and the highest 15·7 in Manchester, 16·0 in Liverpool, and 17·5 in Bolton.

Among persons aged 60 years and upwards the mortality was at the annual rate of 82·6 per 1000 of the estimated population at these ages, being 9·6 below the mean rate in the ten preceding first quarters. In the thirty-three great towns the rate was 96·0 per 1000, ranging from 70·7 in Swansea, 73·0 in Wolverhampton, and 74·1 in Leicester, to 102·3 in Liverpool, 102·4 in Leeds, 105·5 in Manchester, and 114·8 in Salford.

Compared with the respective rates in the ten next preceding first quarters, the death-rates of infants under one year of age, of persons between one and 60 years of age, and of persons aged 60 years and upwards, were 6·2 per cent., 11·2 per cent., and 10·4 per cent. below their respective averages.

* Furnished by the Chief Cashier of the Bank of England.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. The figures are derived from returns with which the Registrar-General has been favoured by the Mineral Statistics Department, Home Office.

§ Sunderland and Hartlepool coal only.

‖ For Sunderland and Hartlepool coal during the month of June only.

[a] The *Registration* or *Union Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor L Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore di more or less from the boundaries of Geographical Counties.

[b] The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

[a] The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[b] These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks.

[c] See page 14, note b.

[a] The *Registration Sub-districts* (2108 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands: *H* indicates Hospital or Infirmary: and *L* Lunatic Asylum.

[b] For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st April 1893.

At Blackheath the mean temperature on the 2nd, 3rd, 4th, and 5th, were as much as 13°·1, 12°·2, 15°·5, and 16°·8, below their averages, and the mean daily deficiency of temperature to the 18th was as much as $6\frac{3}{4}$°; and for the 28 days beginning December 22nd and ending January 18th was $7\frac{1}{5}$°. The atmospheric pressure was occasionally a little below the average, but was generally above. The fall of rain at some few places was a little above the average, but at most places was a little below.

The weather in February was warm and unsettled, with rain falling on 2 days out of 3 at nearly all stations. The temperature of the air was above its average from the 1st to the 3rd and from the 7th to the 21st, and below it on the other days. The atmospheric pressure was generally above its average till the 7th, and below from the 8th, and particularly so from the 20th to the 27th, when the departures below the average mean daily pressures were 0·44 in., 1·29 in., 0·98 in., 0·55 in., 0·70 in., 0·73 in., 0·99 in., and 0·68 in. in succession. The mean pressure for the month was lower than in any February back to 1879. The fall of rain was above the average.

The weather in March was exceptionally fine, warm, and dry. The temperature of the air, with the exception of the short period from the 17th to the 21st, was above the average; the average mean daily excess to the 16th was $5\frac{1}{4}$°, and from the 22nd to the end of the month was 3°. The mean temperature of the month was 46°·2, and we have to go back to 1859 for as warm a March, and there are but four other instances back to 1771. The atmospheric pressure, with the exception of the 1st and 2nd, and from the 12th to the 17th, was above the average. The mean pressure for the month was higher than in any March back to 1874. The fall of rain was remarkably small; it was only 0·4 inch at Blackheath, and we must go back to the year 1854 to find a March with so small a rainfall.

About London the mean daily temperature of the air was below its average from January 1st to the 18th, being particularly so on the 2nd, 3rd, 4th, and 5th, when it was as much as 13°·1, 12°·2, 15°·5, and 16°·8 respectively below, and on several other days it was as much as 7°, 8°, and 9° below, the mean daily deficiency for the 18 days ending January 18th being 6°·7; from January 19th to February 3rd it was generally above, being as much as 10·6 above on the 31st of January, the mean daily excess for the 16 days being 4°·1; from February 4th to the 6th it was below, the mean daily deficiency being 6°·3; from February 7th to the 21st it was above, being particularly so on the 14th, 18th, and 19th, when it was as much as 9°, 9°·7, and 11°·6 respectively above, the mean daily excess for the 15 days being 4°·8; from February 22nd to the 28th it was below, the mean daily deficiency being 3°·9; from March 1st to the 16th it was above, the mean daily excess being 5°·3; from March 17th to the 21st it was below, the mean daily deficiency being 4°·3; and from March 22nd to the 31st it was above the average, the mean daily excess being 3°·0.

The mean temperature of the air for January was 35°·4, being 1°·2 and 2°·9 below the average of 122 and 52 years respectively; it was 1°·1 lower than in 1892, 1°·3 higher than in 1891, and 8°·0, lower than in 1890.

The mean temperature of the air for February was 41°·1, being 2°·3 and 1°·7 above the average of 122 and 52 years respectively; it was 2°·3, 2°·6, and 3°·6 higher than in 1892, 1891, and 1890 respectively.

The mean temperature of the air for March was 46°·2, being 5°·2 and 4°·8 above the average of 122 and 52 years respectively; it was 8°·9, 5°·9, and 3°·0 higher than in 1892, 1891, and 1890 respectively; and there were only five instances of as high or higher mean temperature for March back to the year 1771, viz. :—

1859 it was 46°·4	1822 it was 47°·3	1779 it was 47°·0
1841 „ 46°·2	1780 „ 49°·2	

The mean high day temperature of the air for January was 39°·3, being 3°·5 below the average of 52 years; it was 1°·5 lower than in 1892, 0°·6 higher than in 1891, and 9°·2 lower than in 1890.

No. 178.] **Marriages**—*January, February, March,* 1893.
Births and **Deaths**—*April, May, June,* 1893. [Price 9*d.*

General Register Office, Somerset House,
28th July, 1893.

The POPULATION of the UNITED KINGDOM in the middle of 1893 is estimated, on the basis of the recent enumerations, at 38,429,992 persons; that of England and Wales at 29,729,506, of Scotland at 4,093,959, and of Ireland at 4,606,527.

In the United Kingdom 297,201 *births* and 172,752 *deaths* were registered in the three months ending 30th June 1893. The natural increase of population was, therefore, 124,449. The registered number of persons married in the quarter ending 31st March 1893 was 106,454.

The birth-rate in the United Kingdom in the second quarter of 1893 was 31·0 and the death-rate 18·0 per 1000. The marriage-rate in the first quarter of 1893 was 11·2 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2109 registration sub-districts of England and Wales during the quarter ending 30th June 1893; and the MARRIAGES in 15,107 churches or chapels, in 11,063 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ending 31st March 1893.

Marriages.

During the first quarter of 1893 the marriages of 80,386 persons were registered in England and Wales, giving an annual rate of 10·9 per 1000 of the estimated population. This rate is not only 1·2 below the average of the rates in the ten immediately preceding first quarters, but is the lowest rate in the first quarter of any year since civil registration began. In registration counties the lowest rates were 7·0 in Hertfordshire, 7·3 in Buckinghamshire, and 7·7 in Middlesex, in Northamptonshire, and in Huntingdonshire; while the highest were 12·4 in Devonshire and in Northumberland, 12·5 in London, 12·6 in South Wales, and 13·2 in the East Riding of Yorkshire.

Births.

The births registered in the second quarter of 1893 numbered 235,109, being in the proportion of 31·7 annually per 1000 living. This is 1·0 below the mean rate in the ten preceding second quarters, and, excepting the second quarters of the years 1890 and 1892, is the smallest rate in the corresponding part of any year on record. In registration counties the rates ranged from 23·9 in Rutlandshire, 24·9 in Sussex, and 25·5 in Surrey, to 36·7 in Monmouthshire, and 37·4 in Staffordshire, in Durham, and in South Wales.

In the thirty-three great towns the birth-rate was 32·2 per 1000. The lowest rates were 24·1 in Huddersfield, 24·3 in Brighton, 25·6 in Halifax, and 25·8 in Croydon; while the highest were 37·2 in Cardiff, 37·4 in Sunderland, and 37·7 in Salford. In sixty-seven other large town districts the birth-rate was 32·9; while in the remainder of the country it was 31·1.

Excess of Births over Deaths, and Emigration.

The *natural increase* of the population of England and Wales, or the excess of births over deaths, which had amounted to 91,435, 67,638, and 100,394 in the second quarters of 1890, 1891, and 1892, was 102,249 last quarter.

It appears from returns issued by the Board of Trade that 120,458 emigrants embarked during the quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing proportionally 560 whose nationality was not distinguished, the emigrants of native origin numbered 75,290, and of these 43,304 were English, 8,121 Scotch, and 23,865 Irish, while those of foreign origin numbered 45,168. The proportions to a million of the estimated population in the several portions of the United Kingdom were 1,457 from England, 1,984 from Scotland, and 5,181 from Ireland. Compared with the averages in the second quarters of the next preceding three years, the proportion of emigrants from England and from Scotland showed an increase, while those from Ireland showed a decrease.

Prices and Pauperism.

During the second quarter of the year the average price of wheat was 26*s.* 2*d.* per quarter, the prices in the preceding two quarters having been 27*s.* 5*d.* and 25*s.* 7*d.* respectively. The mean wholesale prices of beef and mutton in the London market were $5\frac{7}{8}d.$ and $6\frac{3}{8}d.$ per lb. respectively; compared with the prices in the preceding quarter the price of beef showed an increase of $\frac{1}{2}d.$, and that of mutton a decrease of $\frac{1}{2}d.$ per lb. The average price of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 13*s.* 8*d.* per ton, against 18*s.* 2*d.* and 17*s.* 2*d.* in the second quarters of 1891 and 1892. The mean price of $2\frac{3}{4}l.$ per cent. Consols was 98*l.* 16*s.* 2*d.*, against 97*l.* 3*s.* 7*d.* in the fourth quarter of 1892. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 26th January to 2*l.* 10*s.*, was raised on 4th May to 3*l.*, on 11th May to 3*l.* 10*s.*, and on 18th May to 4*l.*, and was reduced on 8th June to 3*l.*, and on 15th June to 2*l.* 10*s.* The average minimum rate charged during the quarter was 3*l.* per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 670,197, of whom 178,956 received in-door, and 491,241 out-door relief. The proportion of the population in receipt of Poor-law relief was 22·5 per 1000, against 22·8 and 22·7 in the second quarters of 1891 and 1892.

Meteorology.

Remarks on the meteorology of the quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, furnished by Mr. James Glaisher, F.R.S., will be found, with accompanying Tables, on pages 65–72. The mean reading of the barometer was 29·905 inches, being ·126 of an inch above the average of the readings in the second quarters of 52 years; the mean reading was above the average in each month of the quarter, the excess in April reaching ·246 of an inch. The mean temperature of the air during the quarter was 57°·0, being 4°·7 above the average in the second quarters of 122 years; the temperature was above the average in each month of the quarter, the excess being 5°·3 in April, 5°·2 in May, and 3°·5 in June. The weather in April was fine and warm, with an unusual amount of sunshine; both the temperature and the atmospheric pressure were above their averages on nearly every day of the month. Similar weather continued through May, the temperature exceeding its average on every day till the 29th, except on the 7th and 8th. During June the weather remained fine, dry, and warm, the temperature of the air reaching 90° on the 19th of the month at some of the southern stations. At 30 stations of observation the mean temperature during the quarter ranged from 50°·7 at Lowestoft, 50°·8 at Halifax, and 51°·0 at Somerleyton, to 56°·4 at Camden Square, 56°·5 at Oxford, and 56°·7 at Osborne.

The amount of rain measured during the quarter at the Royal Observatory, Greenwich, was 1·47 inches, being only about one-fourth of the average in the second quarters of 78 years, which was 5·78 inches. The deficiency in the rainfall was considerable in each month of the quarter, the amount of rain in April being only 7 per cent., in May 26 per cent., and in June 41 per cent. of the average. The total fall in the four months from March to June was 1·90 inches, which is less than the amount in any other consecutive four months back to the year 1815. At 30 stations of observation the rainfall measured in the quarter ranged from 1·25 inches at Barnet, 1·28 inches at Eastbourne, and 1·45 inches at Blackheath, to 4·76 inches at Llandudno, 5·22 inches at Halifax and at Carlisle, and 5·64 inches at Stonyhurst.

The amount of bright sunshine recorded during the quarter at the Royal Observatory was 615·5 hours, or 44·2 per cent. of the total number of hours the sun was above the horizon, the mean proportion in the sixteen preceding second quarters having been 34·4 per cent. The amount was above the average in each month of the quarter; the great excess was, however, in April, when the amount registered was 231 hours, or 55·7 per cent. of the possible total, against an average of 126 hours, or 30·4 per cent. On only three occasions since February 1877, when these observations were commenced, namely, in June 1877, in May 1882, and in July 1887, has the amount of sunshine registered in a calendar month exceeded 231 hours.

Deaths.

The deaths registered during the second quarter of 1893 numbered 132,860, being in the proportion of 17·9 deaths annually per 1000 persons living, against a mean rate of 19·1 per 1000 in the ten preceding second quarters. In registration counties the rates ranged from 13·4 in Rutlandshire, 13·5 in Berkshire and in Oxfordshire, and 13·8 in Westmorland, to 19·9 in South Wales, 20·5 in North Wales, and 21·7 in Lancashire.

The 132,860 deaths included 69,248 of males and 63,612 of females, the rate of mortality among males being 19·3, and that among females 16·6 per 1000 estimated to be living of each sex. These rates were both 1·1 per 1000 below the respective mean rates in the ten preceding second quarters. Out of equal numbers living, the deaths of males were 116 to 100 deaths of females, which was slightly above the proportion in the ten preceding second quarters.

Urban and Rural Mortality.—In the registration districts and sub-districts which are taken to represent approximately the urban portion of the country,

and which contain a population estimated at about nineteen millions, the death-rate last quarter was 18·7 per 1000; while, in the remaining and chiefly rural population of about ten and a half millions, it was 16·4 per 1000. These rates were respectively 1·0 and 1·5 per 1000 below the mean rates in the ten preceding second quarters. Out of equal numbers living, the deaths in the urban districts were to those in the rural districts in the proportion of 114 to 100, the ratio in the ten preceding second quarters having been 110 to 100.

In the thirty-three great towns, with an aggregate population estimated at about ten and a third millions, the annual death-rate last quarter was 19·8 per 1000, the rates in the several towns ranging from 13·6 in Croydon, 14·7 in Nottingham, and 14·8 in West Ham, to 24·4 in Manchester, 26·2 in Preston, and 27·1 in Liverpool.

In sixty-seven other large town districts the death-rate was 17·9 per 1000, or 1·9 per 1000 below the rate in the great towns; while in the remainder of England and Wales, after excluding these 100 towns, the rate was 16·6.

Mortality at different Ages.—Of the 132,860 deaths registered last quarter, 31,660 were of infants under one year of age, 65,837 of persons aged between one and 60 years, and 35,363 of persons aged 60 years and upwards.

The mortality of infants under one year of age was in the proportion of 135 deaths to 1000 births registered, being 7 per 1000 above the mean proportion in the ten preceding second quarters. The proportion was only 73 per 1000 births in Berkshire, 83 in Hertfordshire, and 84 in Oxfordshire and in Wiltshire, but reached 149 in Warwickshire, 158 in South Wales, 159 in Leicestershire, and 169 in Lancashire. In the thirty-three great towns the mean proportion was 158 per 1000, ranging from 103 in Croydon, 122 in Gateshead, and 125 in Hull, to 205 in Leicester, 218 in Liverpool, and 248 in Preston. In sixty-seven other large town districts the infant mortality averaged 144 per 1000 births, the lowest proportions being 79 in Reading, 85 in St. George (Barton Regis), and 86 in Colchester, and the highest 203 in Ashton-under-Lyne, 205 in Stockport, 207 in Ystradyfodwg, and 212 in St. Helen's. In the remainder of the country, after excluding these 100 towns, the infant mortality was 116 per 1000 births registered.

The mortality of persons aged between one and 60 years was at the rate of 9·9 deaths annually per 1000 of the estimated population at these ages, being 0·7 per 1000 below the mean rate in the ten preceding second quarters. In the thirty-three great towns the rate was 11·6 per 1000; the lowest rates being 6·0 in Norwich, 7·7 in Nottingham, and 7·8 in West Ham, and the highest 15·1 in Preston, 15·6 in Manchester, and 16·7 in Liverpool.

Among persons aged 60 years and upwards the mortality was at the annual rate of 64·5 per 1000 of the estimated population at these ages, being 7·9 below the mean rate in the ten preceding second quarters. In the thirty-three great towns the rate was 69·8 per 1000, ranging from 49·6 in Cardiff, 50·6 in Croydon, and 52·5 in Nottingham, to 87·7 in Derby, 88·1 in Bolton, and 93·0 in Sheffield.

Compared with the respective rates in the ten next preceding second quarters, the death-rate of infants under one year of age showed an increase of 5·5 per cent., that of persons between one and 60 years of age a decrease of 6·6 per cent., and that of persons aged 60 years and upwards a decrease of 10·9 per cent.

Zymotic Diseases.—The 132,860 deaths from all causes included—

3859	attributed to	diarrhœa,
3624	„	measles,
2301	„	whooping-cough,
1812	„	diphtheria,
1566	„	scarlet fever,

and 519	„	small-pox.

Thus 14,711 deaths were ascribed to these zymotic causes, corresponding to an annual rate of 1·98 per 1000 living, the average of the rates in the ten preceding second quarters having been 1·80. In the thirty-three great towns the death-rate from these diseases was 2·77, in sixty-seven other large town districts it was 2·27, and in the remainder of the country it was 1·39.

The deaths ascribed to *diarrhœa* numbered 3859, corresponding to an annual rate of 0·52 per 1000, the average of the rates in the ten preceding second quarters having been 0·24. The rate did not reach 0·10 per 1000 in Oxfordshire, Dorsetshire, or Herefordshire, but rose to 0·87 in Warwickshire, 0·91 in Lancashire, 0·97 in Cheshire, and 1·28 in Leicestershire. The deaths ascribed to *measles* numbered 3624, and corresponded to an annual rate of 0·49 per 1000 living, the average of the rates in the ten preceding second quarters having been 0·52. No death from measles was registered during the quarter in Huntingdonshire, Bedfordshire, or Rutlandshire, and the rate did not exceed 0·05 per 1000 in Northamptonshire, Cambridgeshire, or Nottinghamshire, while it rose to 1·02 in Lancashire, 1·06 in Staffordshire, and 1·23 in Northumberland. In the thirty-three great towns the rate was 0·62; but while no death from the disease was recorded in Brighton or Wolverhampton, the rate was 2·03 in Plymouth, 2·21 in Gateshead, 2·69 in Newcastle-on-Tyne, and 4·70 in Preston. In sixty-seven other large town districts the rate was 0·79, while in the remainder of England and Wales it was 0·32. Among districts and sub-districts in which the mortality from measles was excessive were Frimley, Dover, Folkestone, Eastbourne, Alverstoke, Hanley, Shelton, Cannock, Bloxwich, Aldridge, Newton-in-Makerfield, Warrington, North Bury, Batley, Barnsley, and Brampton.

No death from this disease was recorded in Bedfordshire, Rutlandshire, or Westmorland, and only one in Cornwall, but the rate reached 0·53 in Dorsetshire, and 0·56 in Leicestershire. In the thirty-three great towns the rate was 0·47, but while no death from the disease was registered in Wolverhampton, and the rate was only 0·08 in Huddersfield, and 0·12 in Newcastle-on-Tyne, it rose to 0·65 in Norwich, 0·85 in Brighton, and 1·02 in Leicester. Among districts and sub-districts in which the mortality from whooping-cough was excessive were Lowestoft, Poole, Culcheth, Fleetwood, and Holywell.

Under *diphtheria* 1812 deaths were registered, corresponding to an annual rate of 0·24 per 1000 living, the average of the rates in the ten preceding second quarters having been 0·14. The rate did not reach 0·10 in Northamptonshire, Huntingdonshire, Cambridgeshire, Dorsetshire, Cornwall, Staffordshire, Lincolnshire, Nottinghamshire, Derbyshire, the East Riding of Yorkshire, the North Riding of Yorkshire, Cumberland, Northumberland, or North Wales, but rose to 0·37 in Sussex, 0·49 in Surrey, 0·55 in Essex, 0·60 in London, and 0·73 in Rutlandshire. The deaths ascribed to *scarlet fever* numbered 1566, corresponding to an annual rate of 0·21 per 1000 living, the average of the rates in the ten preceding second quarters having been 0·22. No death from the disease was recorded in Huntingdonshire or Rutlandshire, and the rate was only 0·04 in Cambridgeshire, 0·05 in Worcestershire, and 0·06 in Oxfordshire and in the North Riding of Yorkshire, but it reached 0·35 in Monmouthshire, 0·36 in Leicestershire, 0·38 in Cornwall, and 0·47 in Herefordshire. The rate in Middlesex was 0·39, but this rate is due to the deaths in the Metropolitan Asylum Hospitals at Winchmore Hill and Tottenham, the exclusion of which would reduce the rate to 0·12. In the thirty-three great towns the rate was 0·26; but while no death from the disease was registered in Gateshead, and only one each in Brighton and Halifax, the rate rose to 0·45 in Cardiff, 0·47 in Leicester, and 0·56 in Burnley. No death from "fever" was recorded in Herefordshire, and the rate did not reach 0·05 in Buckinghamshire, Oxfordshire, Northamptonshire, or Bedfordshire, but it rose to 0·21 in Lancashire, 0·22 in Durham, and 0·40 in Sussex. In the thirty-three great towns the rate was 0·14, but while no death from the disease occurred in Huddersfield, and the rate was only 0·04 in Halifax, and 0·06 in Oldham, it rose to 0·30 in Sunderland and 0·34 in Liverpool. In sixty-seven other large town districts the rate was 0·18, while in the remainder of the country it was 0·13. Among districts and sub-districts in which "fever" was apparently prevalent were Worthing, Prittlewell, Dilhorne, Runcorn, Oswaldtwisle, and Beverley.

The deaths from *small-pox*, which had been 86, 165, and 377 in the preceding three quarters, further rose to 519, a higher number than in any quarter since March 1888. Of these 519 deaths, 100 occurred in London and the Metropolitan Ships and Camp at Dartford, 16 in Essex, 20 in Warwickshire, 25 in Derbyshire, 110 in Lancashire, and 138 in Yorkshire. Among the thirty-three great towns deaths from small-pox occurred in all but twelve; in Oldham the death-rate from the disease was 0·88, and in Halifax 0·96 per 1000 living. Among districts and sub-districts in which small-pox was specially prevalent were Daventry, Chesterfield, Tideswell, Runcorn, Rossendale, and Bingley.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in England and Wales, in the thirty-three great towns, in sixty-seven other considerable town districts, and in the remainder of the country :—

Watering Places and Summer Resorts.—As usual in the return for the second quarter the deaths from all causes, and from each of the more important zymotic diseases, in several of our chief watering-places, or in the districts which most nearly correspond with them, are shown in Table VIII. For purposes of comparison, the populations according to the census enumeration of 1891 are also given.

Certification of Causes of Death.—Of the 132,860 deaths in England and Wales, the causes of 121,822, or 91·7 per cent., were duly certified by registered medical practitioners, and of 7881, or 5·9 per cent., by coroners after inquest; while the causes of the remaining 3157, or 2·4 per cent., were not certified, the mean proportion of uncertified deaths in the ten preceding second quarters having been 3·2 per cent. The lowest proportions in registration counties were 0·8 in Wiltshire and in Monmouthshire, and 1·1 in Surrey and in Middlesex; the highest were 3·8 in Essex and in Derbyshire, 3·9 in Dorsetshire, 4·2 in Herefordshire, and 5·3 in North Wales. In the thirty-three great towns the proportion of uncertified deaths was 1·7 per cent.; but while no uncertified death was registered in Croydon, and the proportion was only 0·4 in Plymouth and 0·6 in Bolton, it reached 4·1 in Salford and in Halifax, 4·3 in Birmingham, and 5·7 in West Ham.

Violent Deaths.—To different forms of violence 4731 deaths were referred, corresponding to an annual rate of 0·64 per 1000 living, the average of the rates in the ten preceding second quarters having been 0·61. In registration counties the rates ranged from 0·18 in Rutlandshire, 0·24 in Westmorland, and 0·38 in Sussex and in Bedfordshire, to 0·71 in Cheshire, 0·74 in Lancashire, 0·77 in Cornwall, and 0·97 in South Wales. In the thirty-three great towns the rate was 0·70, ranging from 0·25 in Huddersfield, 0·35 in Halifax, and 0·37 in West Ham, to 0·81 in Birkenhead, 0·85 in Salford, 0·90 in Wolverhampton, and 1·46 in Liverpool.

Inquests.—Inquests were held respecting 7881, or 5·9 per cent., of the total deaths, the mean proportion in the ten preceding second quarters having been 5·4. In the thirty-three great towns the proportion was 6·8 per cent., ranging from 1·7 in Huddersfield, 2·1 in Preston, and 2·8 in Birmingham, to 8·6 in Wolverhampton, 9·0 in Birkenhead, and 9·6 in Derby.

Deaths in Public Institutions.—Of the total deaths registered in England and Wales, 17,139, or 12·9 per cent., occurred in workhouses, hospitals, and public lunatic asylums, the proportion in the ten preceding second quarters having been 11·4 per cent. In the thirty-three great towns the proportion of deaths in such institutions was 20·3 per cent., ranging from 5·2 in Gateshead, 5·3 in Preston, and 5·9 in Burnley, to 20·5 in Bristol, 20·9 in Liverpool, 22·3 in Wolverhampton, and 28·8 in London.

Edinburgh, Glasgow, and Dublin.—The death-rate in Edinburgh was 18·0, in Glasgow 24·6, and in Dublin 26·2, against 19·5 in London.

Colonial and Foreign Cities.—A summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, shows that the deaths last quarter in thirty Colonial and Foreign cities, with an aggregate population of about eighteen and a half millions, were equal to an annual rate of 25·8 per 1000 living.

In the twenty-one European cities the mean death-rate was 24·9 per 1000, against 19·8 per 1000 in the thirty-three great English towns. In Paris the rate was 25·1, in Berlin 20·7, and in Vienna 27·2, the rate in London being 19·5. Among the thirty Colonial and Foreign cities the lowest death-rates were 16·7 in Christiania, 17·2 in the Hague, and 20·3 in Amsterdam and in Hamburg; while the highest were 34·3 in Moscow, 34·6 in Alexandria, 38·7 in Madras, and 51·2 in Cairo. *Small-pox* caused 106 deaths in Bombay, 63 in Trieste, 50 in Prague, 49 in Paris,

and 43 in Moscow. The mortality from *measles* was proportionally highest in Madras, Brussels, Dresden, Breslau, Vienna, and Venice; from *scarlet fever* in Stockholm, Moscow, New York, and Brooklyn; and from *whooping-cough* in Amsterdam, Copenhagen, Stockholm, Berlin, Prague, Cairo, and New York. The mortality from *diphtheria* was excessive in Paris, Copenhagen, Stockholm, Moscow, New York, Brooklyn, Philadelphia, and the German and Austrian cities; from "*fever*" in the Indian and African cities, and in Moscow, Rome, Philadelphia, and New Orleans; and from *diarrhœal diseases* in Calcutta, Madras, Moscow, Munich, Cairo, Alexandria, and New Orleans.

† As published by the Comptroller of Corn Returns to the Board of Trade.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. The figures are derived from returns with which the Registrar-General has been favoured by the Mineral Statistics Department, Home Office.

§ Sunderland and Hartlepool coal only.

[a] The *Registration* or *Union Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor L Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore d more or less from the boundaries of Geographical Counties.

[b] The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

[a] The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[b] These areas, which were partly revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1891. They do not include spaces occupied by foreshore or tidal water of rivers and creeks. [c] See page 14 note b.

[a] The *Registration Sub-districts* (2109 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

[b] For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 1st July 1893.

METEOROLOGY OF ENGLAND.

Remarks on the Weather during the Quarter ending June 30th, 1893.

By James Glaisher, Esq., F.R.S., *&c.*

The weather in April was remarkable for its small rainfall, unusual amount of sunshine, and fineness generally. The temperature of the air was above its average on every day excepting the 9th, 11th, 12th, 13th, 14th, 17th, and 30th; after the middle of the month the temperature was that of summer. The atmospheric pressure was above its average on nearly every day. The mean pressure was higher than in any April back to 1861. The fall of rain was only 0·09 at Blackheath, and we must go back to 1855 for as small a fall, viz., 0·1; the fall was also 0·1 in. in 1840 and 1817. The fall of rain in March and April together was 0·49 in., and we have to go back to 1840 for so small a fall in March and April, when the amount was 0·4 in. The consequent drought became very serious, particularly in the southern and midland counties.

The weather in May was remarkably fine and dry, being in fact a continuation of the exceptional weather of the two preceding months. The temperature of the air was above its average on every day till the 29th, with the exception of the 7th and 8th. The atmospheric pressure was above its average till the 14th, and from the 25th. The fall of rain was small, none fell at Blackheath till the 16th, then a little fell daily to the 23rd, and on the 29th. The fall in the month was 0·52 in., and in the three months, March, April, and May, it was one inch, giving daily average of only about a hundredth of an inch. The smallest fall in these three months at Greenwich back to 1815 are as follows:—

in.	in.	in.
1833 – 2·4	1840 – 2·5	1863 – 2·3
1834 – 2·2	1844 – 3·0	1870 – 2·8
1837 – 2·8	1852 – 2·6	1874 – 2·3
1838 – 3·0	1857 – 2·8	

So that the fall in those three months is less than the half of that in the year 1834, and is, so far as I know, unprecedented.

The following table shows the falls of rain in these months at the different stations, with the number of consecutive days without rain:—

So that the drought has been general, but it has been most severely experienced at the southern stations, where the falls have been less than half of those at the northern, and the intervals without rain have been about twice as long.

The weather in June was very fine and dry. The temperature of the air was generally above its average, but was occasionally for two or three days together below. It was very warm about the middle of the month; on the 19th it was 90° or near 90° at southern and midland stations, and about 85° at northern. The atmospheric pressure was above its average from the 4th to the

12th, on the 16th, 17th, 18th, and 30th days, and below on all other days. The fall of rain at Blackheath was small, a little fell on the 7th and 20th, amounting to 0·17 inch, then daily from the 23rd to the 28th. The drought which began on March 5th continued to June 22nd; the fall of rain

from March 5th to 31st was	0·140 in.	–	27 days.
April 1st „ 30th „	0·086 „	–	30 „

June 1st „ 22nd „	0·170 „	–	22 „
	0·911 in.		110 days.

The fall of rain in the four months, March, April, May, and June, was 1·90 in., being just the half of that which fell in the same four months in the year 1837. The following are the only instances back to 1815 of falls of rain less than 4 inches in any consecutive four months, viz.:—

So that the fall of rain this year in the months March to June is less than in any four consecutive months back to 1815. Hay crops are deficient everywhere, but better in the north than in the south, where they are very light. In some places the crop has quite failed.

About London the mean daily temperature of the air was generally above its average till April 10th, the mean daily excess being 2°·7; from April 11th to the 14th it was below, the mean mean daily deficiency being 3°·7; from April 15th to May 29th it was above, being particularly so on the 19th, 20th, 21st, 24th, and 25th of April and on the 13th of May, when it was as much as 10°·3, 10°·8, 11°·0, 9°·4, 9°·4, and 10°·9 respectively above; the mean daily excess for the 45 days ending May 29th being 4°·8; from May 30th to June 3rd it was below, the mean daily deficiency being 3°·9; from June 4th to the 19th it was generally above, being particularly so from the 15th to the 19th, the mean daily excess for these five days being 10°·3; and the mean daily excess for the 16 days ending June 19th being 4°·5; from June 20th to the 26th it was below, the mean daily deficiency being 3°·1; and from June 27th to the 30th it was above its average, the mean daily excess being 1°·6.

General Register Office, Somerset House,
28th October, 1893.

The POPULATION of the UNITED KINGDOM in the middle of 1893 is estimated, on the basis of the recent enumerations, at 38,431,586 persons; that of England and Wales at 29,731,100, of Scotland at 4,093,959, and of Ireland at 4,606,527.

In the United Kingdom 286,530 *births* and 179,792 *deaths* were registered in the three months ending 30th September 1893. The natural increase of population was, therefore, 106,738. The registered number of persons married in the quarter ending 30th June 1893 was 141,828.

The birth-rate in the United Kingdom in the third quarter of 1893 was 29·6 and the death-rate 18·6 per 1000. The marriage-rate in the second quarter of 1893 was 14·8 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2108 registration sub-districts of England and Wales during the quarter ending 30th September 1893; and the MARRIAGES in 15,108 churches or chapels, in 11,144 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ending 30th June 1893.

Marriages.

During the second quarter of 1893 the marriages of 117,614 persons were registered in England and Wales, giving an annual rate of 15·9 per 1000 of the estimated population, which is 0·6 above the average of the rates in the ten immediately preceding second quarters. In registration counties the lowest rates were 11·5 in Norfolk, 11·9 in Middlesex, and 12·2 in Hertfordshire and in Cambridgeshire; while the highest were 17·8 in Leicestershire, 18·0 in London, and 18·6 in Lincolnshire and in Nottinghamshire.

A 78471. 2825.—10/93. Wt. 34. E. & S.

Births.

The births registered in the third quarter of 1893 numbered 229,147, being in the proportion of 30·6 annually per 1000 living. This is 0·8 below the mean rate in the ten preceding third quarters, but is exactly equal to the mean rate in the third quarters of the five years 1888–1892, in none of which did the birth-rate rise above 30·8 or fall below 30·3 per 1000. In registration counties the rates ranged from 24·5 in Sussex, 25·1 in Rutlandshire, and 25·2 in Surrey, to 35·1 in Staffordshire, 35·3 in South Wales, 35·7 in Monmouthshire, and 36·0 in Durham.

In the thirty-three great towns the birth-rate was 31·5 per 1000. The lowest rates were 23·1 in Huddersfield, 24·6 in Brighton, and 26·0 in Halifax; while the highest were 35·4 in Wolverhampton, 35·6 in Preston, 35·9 in Liverpool, and 36·4 in Cardiff. In sixty-seven other large town districts the birth-rate was 31·5; while in the remainder of the country it was 29·8.

Excess of Births over Deaths, and Emigration.

The *natural increase* of the population of England and Wales, or the excess of births over deaths, which had amounted to 98,254, 107,890, and 112,521 in the third quarters of 1890, 1891, and 1892, was 85,767 last quarter.

It appears from returns issued by the Board of Trade that 88,435 emigrants embarked during the quarter from the various ports of the United Kingdom at which emigration officers are stationed. Distributing proportionally 980 whose nationality was not distinguished, the emigrants of native origin numbered 65,763, and of these 44,801 were English, 7,381 Scotch, and 13,581 Irish, while those of foreign origin numbered 22,672. The proportions to a million of the estimated population in the several portions of the United Kingdom were 1,507 from England, 1,803 from Scotland, and 2,948 from Ireland. Compared with the averages in the third quarters of the next preceding three years, the proportion of emigrants from England showed a decrease of 6·7 per cent., from Scotland a decrease of 2·0 per cent., and from Ireland a decrease of 1·1 per cent.

Prices and Pauperism.

During the third quarter of the year the average price of wheat was 26*s.* 4*d.* per quarter, the prices in the preceding two quarters having been 25*s.* 7*d.* and 26*s.* 2*d.* respectively. The mean wholesale prices of beef and mutton in the London market were 6*d.* and $6\frac{7}{8}$*d.* per lb. respectively; compared with the prices in the preceding quarter the price of beef showed an increase of $\frac{1}{8}$*d.*, and that of mutton an increase of $\frac{1}{2}$*d.* per lb. The average price of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 18*s.* 5*d.* per ton, against 18*s.* 8*d.* and 17*s.* 7*d.* in the third quarters of 1891 and 1892. The mean price of $2\frac{3}{4}$*l.* per cent. Consols was 98*l.* 4*s.* 2*d.*, against 98*l.* 6*s.* 5*d.* in the first quarter of 1893. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced on 15th June to 2*l.* 10*s.*, was raised to 3*l.* on 3rd August, to 4*l.* on 10th August, and to 5*l.* on 24th August, and was reduced to 4*l.* on 14th September, and to $3\frac{1}{2}$*l.* on 21st September. The average minimum rate charged during the quarter was 3*l.* 11*s.* 2*d.* per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 670,460 of whom 181,514 received in-door, and 488,946 out-door relief. The proportion of the population in receipt of Poor-law relief was 22·6 per 1000, against 22·0 and 21·8 in the third quarters of 1891 and 1892.

Meteorology.

Remarks on the meteorology of the quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, furnished by Mr. James Glaisher, F.R.S., will be found, with accompanying Tables, on pages 65–72. The mean reading of the barometer was 29·764 inches, being ·029 of an inch below the average of the readings in the third quarters of 52 years; the mean reading was ·061 below the average in July, ·081 above in August, and ·108 below in September. The mean temperature of the air during the quarter was 61°·9, being 2°·2 above the average in the third quarters of 122 years; the temperature was above the average in each month of the quarter, the excess being 1°·5 in July, 4°·6 in August, and 0°·5 in September. The temperature was above the average in each of the eight months ending with September, the mean excess having been 3·5. With the exception of five periods, averaging about a week in length, the weather throughout the quarter was fine, warm, and dry, and harvest work began fully a month earlier than usual; the want of water was, however, severely felt in most parts of the country. At 30 stations of observation the mean temperature during the quarter ranged from 56°·9 at Halifax, 57°·8 at Stonyhurst, and 58°·7 at Bath and at Carlisle, to 61°·8 in Guernsey, and 61°·9 at Camden Square, London, and at the Royal Observatory, Greenwich.

The amount of rain measured during the quarter at the Royal Observatory, Greenwich, was 5·87 inches, being 1·44 inches below the average of the third quarters of 78 years. Compared with the respective monthly averages, the rainfall showed an excess of 0·76 of an inch in July, a deficiency of 1·14 inches in August, and a deficiency of 1·06 inches in September. At 30 stations of observation the rainfall measured in the quarter ranged from 3·91 inches at Somerleyton, 4·15 inches at Lowestoft, and 4·30 inches at Wolverhampton, to 11·85 inches at Bath, 12·59 inches at Barnstaple, and 18·33 inches at Stonyhurst.

The amount of bright sunshine recorded during the quarter at the Royal Observatory was 457·5 hours, or 34·6 per cent. of the total number of hours the sun was above the horizon, the mean proportion in the sixteen preceding third quarters having been 32·9 per cent. The amount was 15·0 per cent. below the average in July, 23·0 per cent. above in August, and 9·7 per cent. above in September.

Deaths.

The deaths registered during the third quarter of 1893 numbered 143,380, being in the proportion of 19·1 deaths annually per 1000 persons living, against a mean rate of 17·0 per 1000 in the ten preceding third quarters. In registration counties the rates ranged from 12·8 in Dorsetshire, 13·0 in Buckinghamshire, 13·4 in Rutlandshire, and 13·6 in Somersetshire, to 21·7 in Northumberland, 23·5 in Lancashire, 23·8 in Durham, and 24·3 in the East Riding of Yorkshire.

The 143,380 deaths included 74,295 of males and 69,085 of females, the rate of mortality among males being 20·5, and that among females 17·9 per 1000 estimated to be living of each sex. These rates were respectively 2·4 and 2·0 per 1000 above the respective mean rates in the ten preceding third quarters. Out of equal numbers living, the deaths of males were 115 to 100 deaths of females, the proportion in the ten preceding third quarters having been 114 to 100.

Urban and Rural Mortality.—In the registration districts and sub-districts which are taken to represent approximately the urban portion of the country, and which contain a population estimated at about nineteen millions, the death-rate last quarter was 20·6 per 1000; while, in the remaining and chiefly rural population of about ten and a half millions, it was 16·5 per 1000. These rates were respectively 2·3 and 1·8 per 1000 above the mean rates in the ten preceding third quarters. Out of equal numbers living, the deaths in the urban districts were

to those in the rural districts in the proportion of 125 to 100, the ratio in the ten preceding third quarters having been 124 to 100.

In the thirty-three great towns, with an aggregate population estimated at about ten and a third millions, the annual death-rate last quarter was 21·8 per 1000, the rates in the several towns ranging from 16·1 in Bristol, 16·2 in Huddersfield and in Halifax, and 16·7 in Croydon, to 27·3 in Sunderland, 28·0 in Blackburn, 28·4 in Liverpool, and 33·2 in Preston.

In sixty-seven other large town districts the death-rate was 20·0 per 1000, or 1·8 per 1000 below the rate in the great towns; while in the remainder of England and Wales, after excluding these 100 towns, the rate was 17·2.

Mortality at different Ages.—Of the 143,380 deaths registered last quarter, 48,926 were of infants under one year of age, 63,403 of persons aged between one and 60 years, and 31,051 of persons aged 60 years and upwards.

The mortality of infants under one year of age was in the proportion of 214 deaths to 1000 births registered, being 55 per 1000 above the mean proportion in the ten preceding third quarters. The proportion was only 105 per 1000 births in Somersetshire, 108 in Wiltshire, 115 in Shropshire, and 116 in Buckinghamshire and in Dorsetshire, but reached 266 in Durham, 275 in Lancashire, and 330 in the East Riding of Yorkshire. In the thirty-three great towns the mean proportion was 250 per 1000, ranging from 154 in Bristol, 171 in Huddersfield, and 189 in Plymouth, to 375 in Blackburn, 378 in Hull, and 476 in Preston. In sixty-seven other large town districts the infant mortality averaged 245 per 1000 births, the lowest proportions being 140 in Devonport and in Bath, 141 in Hastings, and 142 in Hornsey, and the highest 346 in Warrington, 348 in Ashton-under-Lyne, 374 in Scarborough, and 405 in Grimsby. In the remainder of the country, after excluding these 100 towns, the infant mortality was 179 per 1000 births registered.

The mortality of persons aged between one and 60 years was at the rate of 9·4 deaths annually per 1000 of the estimated population at these ages, being 0·6 per 1000 above the mean rate in the ten preceding third quarters. In the thirty-three great towns the rate was 11·2 per 1000; the lowest rates being 8·0 in Croydon, in Bristol, and in Halifax, and the highest 13·6 in Preston, 13·8 in Blackburn, and 16·3 in Liverpool.

Among persons aged 60 years and upwards the mortality was at the annual rate of 56·1 per 1000 of the estimated population at these ages, being 0·9 per 1000 above the mean rate in the ten preceding third quarters. In the thirty-three great towns the rate was 61·4 per 1000, ranging from 43·1 in Norwich, 45·3 in Brighton, and 49·7 in Plymouth, to 75·9 in Blackburn, 76·4 in Newcastle-on-Tyne, 80·6 in Sunderland, and 94·2 in Bolton.

Compared with the respective rates in the ten next preceding third quarters the death-rate of infants under one year of age showed an excess of 34·6 per cent., that of persons between one and 60 years of age an excess of 6·8 per cent., and that of persons aged 60 years and upwards an excess of 1·6 per cent.

Zymotic Diseases.—The 143,380 deaths from all causes included—

21,020	attributed to	diarrhœa,
2490	„	"fever,"
2218	„	diphtheria,
2197	„	whooping-cough,
2075	„	measles,
1729	„	scarlet fever,
and 244	„	small-pox.

Thus 31,973 deaths were ascribed to these zymotic causes, corresponding to an annual rate of 4·27 per 1000 living, the average of the rates in the ten preceding third quarters having been 2·80. In the thirty-three great towns the death-rate from these diseases was 5·42, in sixty-seven other large town districts it was 5·16, and in the remainder of the country it was 3·29.

The deaths ascribed to *diarrhœa* numbered 21,020, corresponding to an annual rate of 2·81 per 1000, the average of the rates in the ten preceding third quarters having been 1·57. The rate did not reach 0·50 per 1000 in Herefordshire or Rutlandshire, but rose to 4·00 in the West Riding of Yorkshire, 4·11 in Warwickshire, 4·49 in Lancashire, 4·73 in Durham, and 6·90 in the East Riding of Yorkshire. In sixty-seven other large town districts the rate was 3·73, while in the remainder of England and Wales it was 2·12. Among districts and sub-districts in which the mortality ascribed to diarrhœa showed excess were Walsall, Great Grimsby, Chesterfield, Wigan, Warrington, Atherton, Darfield, Hartlepool, and Blyth.

As is usual in the return for the third quarter of each year, special tables have been prepared relating to the mortality from diarrhœa in England and Wales, and in several large towns (*see* pp. xiv–xv).

To "*fever*," including typhus, enteric fever, and simple or ill-defined forms of continued fever, 2490 deaths were attributed, corresponding to an annual rate of 0·33 per 1000 living, the average of the rates in the ten preceding third quarters having been 0·21. The rate did not reach 0·10 in Berkshire, Oxfordshire, Wiltshire, Somersetshire, Gloucestershire, or Cumberland, but rose to 0·79 in the East Riding of Yorkshire, 0·82 in Durham, and 1·14 in Sussex. In the thirty-three great towns the rate was 0·32, but while it was only 0·09 in Bristol, 0·12 in Oldham, and 0·13 in Gateshead, it rose to 0·72 in Liverpool, 0·75 in Hull, 0·98 in Preston, and 1·37 in Sunderland. In sixty-seven other large town districts the rate was 0·49, while in the remainder of the country it was 0·30. In Worthing sub-district, which in 1891 contained a population of about 20,000 persons, the number of deaths from "fever" was no less than 136, in addition to 44 deaths from the same cause in May and June last; among other districts and sub-districts in which "fever" was specially prevalent were Barnsley, Darfield, Walmgate, Bishop Auckland, Easington, Houghton-le-Spring, Ystradyfodwg, and Holywell.

Under *diphtheria* 2218 deaths were registered, corresponding to an annual rate of 0·30 per 1000 living, the average of the rates in the ten preceding third quarters having been 0·15. No death from the disease was recorded in Rutlandshire, and the rate was less than 0·10 in Surrey, Berkshire, Cambridgeshire, Dorsetshire, Lincolnshire, the East Riding of Yorkshire, and Northumberland, but it reached 0·46 in Leicestershire, 0·49 in Nottinghamshire, and 0·62 in Cornwall. In Middlesex the rate was 0·51, but if the deaths in the Metropolitan Asylum Hospitals at Winchmore Hill and Tottenham be excluded this will be reduced to 0·31. In the thirty-three great towns the rate was 0·31; but while no death from the disease was registered in Croydon, and only one each in Oldham, Blackburn, and Halifax, the rate rose to 0·52 in Bradford, 0·59 in Leicester, and 0·69 in Burnley. In sixty-seven other large town districts the rate was 0·20, while in the remainder of the country it was 0·19. Among districts and sub-districts in which the mortality from scarlet fever was excessive were Higham Ferrers, Harwich, Stanway, Heavitree, and Penzance.

The deaths from *small-pox*, which had been 86, 165, 377, and 519 in the preceding four quarters, fell last quarter to 244. Of these 244 deaths, 49 occurred in London and the Metropolitan Ships and Camp at Dartford, 32 in Essex, 16 in Staffordshire, 9 in Warwickshire, 18 in Derbyshire, 22 in Lancashire, and 57 in the West Riding of Yorkshire. Deaths from small-pox occurred in twelve of the thirty-three towns; in Oldham the death-rate from the disease was 0·24, in West Ham 0·48, and in Bradford 0·56 per 1000 living. Among districts and sub-districts in which small-pox was specially prevalent were Walsall, Chesterfield, Wakefield, and Goole.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in England and Wales, in the thirty-three great towns, in sixty-seven other considerable town districts, and in the remainder of the country :—

In the twenty-two European cities the mean death-rate was 23·3 per 1000, against 21·8 per 1000 in the thirty-three great English towns. In Paris the rate was 19·0, in Berlin 24·3, and in Vienna 20·6, the rate in London being 20·5. Among the thirty-one Colonial and Foreign cities the lowest death-rates were 16·3 in Stockholm, 17·4 in Amsterdam, 17·7 in Turin, and 17·9 in Christiania; while the highest were 39·3 in Alexandria, 45·0 in Moscow, 46·1 in Madras, and 58·7 in Cairo. *Small-pox* caused 82 deaths in Paris, 65 in Trieste, 29 in Bombay, 26 in Rotterdam, and 22 in New York. The mortality from *measles* was proportionally highest in Brussels, Breslau, Vienna, and Rome; from *scarlet fever* in Stockholm, Prague, and Berlin; and from *whooping-cough* in Berlin, Dresden, and Breslau. *Diphtheria* was excessively fatal in the German, Austrian, and American cities; "*fever*" in the Indian and African cities, and in St. Petersburg and Philadelphia; and *diarrhœal diseases* in all excepting the Dutch cities, Prague, Trieste, Rome, and Turin. The deaths from diarrhœal diseases included 691 from cholera in Moscow, 389 in St. Petersburg, and 115 in Calcutta.

‡ These are the average prices at which the best seaborne Newcastle, Sunderland, and Hartlepool coals are put in barge from the collier in the Thames; the difference between these prices and those charged to the consumer represents the cost of distribution and merchant's profit. The figures are derived from returns with which the Registrar-General has been favoured by the Mineral Statistics Department, Home Office.

[a] The *Registration or Union Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor L
Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which
principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore di
more or less from the boundaries of Geographical Counties.

[b] The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

in the foot notes.

* The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[b] These areas, revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal water of rivers and creeks.

[c] See page 14, note [b].

* 6 : 1.—On the 1st of September 1893 the sub-district of Cavendish Square was abolished and added to that of All Souls for Registration purposes.

[a] The *Registration Sub-districts* (2108 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands: *H* indicates Hospital or Infirmary: and *L* Lunatic Asylum.

[b] For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 30th Sept. 1893.

From this table it will be seen that at several stations on six days out of the eight, the temperature rose above 80° ; whilst at some stations in the eastern part of the country, as at Lowestoft, the maximum temperature was below 70° till the 8th, on which day it was 76°·5; and at Somerleyton it was below 70° till the 7th, and rose to 82°·5 on the 8th; whilst at Salisbury, Blackheath, Royal Observatory, Camden Square, Barnet, Royston, Rugby, and Carlisle, the highest temperatures were recorded, varying from 87°·2 to 90°·7.

The atmospheric pressure, with the exception of the first three days and three days towards the end of the month, was below the average. The fall of rain was generally small, but at a few stations it slightly exceeded the average; on the whole the want of water was severely felt. Harvest work began generally fully a month earlier than usual.

The weather in August was very warm, fine, and dry, with a remarkably hot period extending from the 8th to the 18th. The temperature of the air was a little below the average till the 7th, and from the 23rd to the 29th, and above on all other days. The following table shows the maximum temperatures at the different stations from the 8th to the 19th of August.

No. 180.] **Marriages**—*July, August, September,* 1893.
Births and **Deaths**—*October, November, December,* 1893. [Price 9*d.*

General Register Office, Somerset House,
29th January, 1894.

The POPULATION of the UNITED KINGDOM in the middle of 1893 is estimated at 38,431,586 persons; that of England and Wales at 29,731,100, of Scotland at 4,093,959, and of Ireland at 4,606,527.

In the United Kingdom 273,703 *births* and 191,418 *deaths* were registered in the three months ending 31st December 1893. The natural increase of population was, therefore, 82,285. The registered number of persons married in the quarter ending 30th September 1893 was 139,734.

The birth-rate in the United Kingdom in the fourth quarter of 1893 was 28·3, and the death-rate 19·8, per 1000. The marriage-rate in the third quarter of 1893 was 14·4 per 1000.

The facts, in detail, concerning Scotland and Ireland are recorded in the Quarterly Returns of the Registrars-General for those parts of the United Kingdom.

ENGLAND AND WALES.

This Return comprises the BIRTHS and DEATHS registered in the 2107 registration sub-districts of England and Wales during the quarter ending 31st December 1893; and the MARRIAGES in 15,108 churches or chapels, in 11,144 registered places of worship unconnected with the Established Church, and in 633 Superintendent Registrars' Offices, in the three months ending 30th September 1893.

Marriages.

During the third quarter of 1893 the marriages of 116,684 persons were registered in England and Wales, giving an annual rate of 15·6 persons married per 1000 of the estimated population. This rate, though slightly lower than that in the third quarter of 1892, exceeded by 0·6 per 1000 the average rate in the corresponding quarters of the ten years 1883–92. In registration counties the lowest rates were 11·6 in Suffolk, 11·7 in Norfolk, 11·8 in Shropshire, and 12·1 in Cumberland and in the North Riding of Yorkshire; the rates in the other counties ranging upwards to 16·4 in the East Riding of Yorkshire, 17·3 in Lancashire, and 19·3 in London.

Births.

The births registered in the fourth quarter of 1893 numbered 218,637, being in the proportion of 29·2 annually per 1000 living. This is the lowest birth-rate recorded in the fourth quarter of any year except 1890, when it was 28·1, and was 1·7 per 1000 below the mean birth-rate in the corresponding quarters of the ten years 1883–92. In registration counties the lowest rates were 23·6 in Westmorland, 23·7 in Sussex, and 23·9 in Dorsetshire, the rates in the other counties ranging upwards to 33·3 in South Wales, 33·4 in Staffordshire, and 34·9 in Durham.

In the thirty-three great towns the birth-rates averaged 30·7 per 1000, the lowest rates being 23·0 in Halifax, 23·3 in Huddersfield, 25·0 in Brighton, and 25·4 in Croydon; and the highest 34·7 in Swansea, 34·8 in Sunderland, and 37·8 in Gateshead. In sixty-seven other large town districts the birth-rate was 30·2 per 1000, while in the remainder of England and Wales it was 28·0.

Excess of Births over Deaths, and Emigration.

The *natural increase* of the population of England and Wales, or the excess of births over deaths, which had amounted to 57,678, 79,558, and 87,896 in the corresponding quarters of the preceding three years, was 69,580 last quarter.

It appears from returns issued by the Board of Trade that 40,227 emigrants embarked during the quarter, for places outside Europe, from the various ports of the United Kingdom at which emigration officers are stationed. Distributing proportionally 1274 whose nationality was not distinguished, the emigrants who were natives of the United Kingdom numbered 31,231; of these, 22,467 were English, 3,398 Scotch, and 5,366 Irish, while those of foreign origin numbered 8,996. The proportions to a million of the estimated population in the several portions of the United Kingdom were 756 from England, 830 from Scotland, and 1,165 from Ireland. Compared with the averages in the corresponding quarters of the preceding three years, the proportion of emigrants from each division of the United Kingdom showed a decline, viz., from England of 27·9 per cent., from Scotland of 20·1 per cent., and from Ireland of 22·0 per cent.

Prices and Pauperism.

During the last three months of 1893 the average price of wheat further rose to 27*s.* 2*d.* per quarter, the average prices in the preceding three quarters having been 25*s.* 7*d.*, 26*s.* 2*d.*, and 26*s.* 4*d.* The mean wholesale prices of beef and mutton in the London market last quarter were $5\frac{6}{8}d.$ and 7*d.*, respectively; the mean price of beef having declined $\frac{2}{8}d.$, and that of mutton having increased $\frac{1}{8}d.$, compared with the prices in the previous quarter. The average price of the best seaborne coal in the London market, put in barge from the collier in the Thames, was 27*s.* per ton, against 18*s.* 1*d.* and 16*s.* 7*d.* per ton in the corresponding quarters of 1891 and 1892. The mean price of $2\frac{3}{4}l.$ per cent. Consols was 98*l.* 2*s.* 7*d.*, against 98*l.* 16*s.* 2*d.* in the second quarter of the year. The minimum annual rate per cent. of discount charged at the Bank of England, which had been reduced to $3\frac{1}{2}l.$ on 21st September, was further reduced to 3*l.* on 5th October. The average minimum rate for last quarter was 3*l.* 0*s.* 5*d.* per cent.

The average number of paupers (exclusive of lunatics in asylums, and of vagrants) relieved in England and Wales on the last day of each week in the quarter was 712,688, of whom 201,303 received in-door, and 511,385 out-door relief. The proportion of the population in receipt of Poor-law relief was 24·0 per 1000, against 22·5 and 22·6 per 1000 in the corresponding quarters of 1891 and 1892.

Meteorology.

Remarks on the meteorology of last quarter, based on observations at the Royal Observatory, Greenwich, and at various other stations, furnished by Mr. James Glasher, F.R.S., will be found, with accompanying Tables, on pages 65–72. The mean reading of the barometer was 29·794 inches, being ·045 of an inch in excess of the average of the readings in the corresponding quarters of 53 years; the mean reading exceeded the average by ·034 of an inch in October, by ·065 of an inch in November, and by ·037 of an inch in December. The mean temperature of the air during the quarter was 44°·6, being 1°·0 above the average of 122 years; it was 2°·1 above the average in October and 1°·6 in December, while in November it was 0°·7 below the average. October was generally fine and warm, though there was frequent rain in the middle of the month; November was for the most part cloudy and cold, and on the 18th and 19th days there was a severe north-westerly gale with snow; in December the weather was dull and mild, but from the 11th to the 13th days there was a heavy gale, causing great damage and loss of life. At 28 stations of observation the mean temperature during the quarter ranged from 41°·8 at Wolverhampton, 42°·6 at Halifax, and 42°·9 at Whitchurch (Oxon), to 47°·0 at Barnstaple, 47°·2 at Truro, and 49°·4 in Guernsey.

The amount of rain measured during the quarter at the Royal Observatory, Greenwich, was 8·19 inches, exceeding the average in the corresponding quarters of 78 years by 1·12 inches. Compared with the respective monthly averages, there was an excess of 1·39 inches in October and of 0·24 inch in December, while there was a deficiency in November of 0·51 inch. At 28 stations of observation the amounts of rain measured in the quarter ranged from 5·13 inches at Nottingham, 6·06 inches at Wolverhampton, and 6·29 inches at Somerleyton, to 10·64 inches in Guernsey, 10·66 inches at Barnstaple, 12·06 inches at Truro, and 17·34 inches at Stonyhurst.

The amount of bright sunshine recorded during the quarter at the Royal Observatory was 161·6 hours, or 19·3 per cent. of the total number of hours the sun was above the horizon, the mean proportion in the preceding sixteen corresponding quarters having been 16·8 per cent. The duration of bright sunshine was 34 per cent. above the average in October and 21 per cent. in December, while in November it was 24 per cent. below the average.

Deaths.

The deaths registered in the fourth quarter of 1893 numbered 149,057, and were in the proportion of 19·9 deaths annually per 1000 persons living, the mean rate in the corresponding quarters of the ten preceding years having been 18·9. In registration counties the rate did not exceed 13·6 in Dorsetshire, 13·9 in Berkshire, or 14·8 in Huntingdonshire, while in the other counties the rates ranged upwards to 22·3 in Cornwall and in the East Riding of Yorkshire, 22·5 in Lancashire, and 22·6 in London.

The 149,057 deaths included 75,011 of males and 74,046 of females. The annual death-rate per 1000 of the estimated population of each sex was 20·7 among males, and 19·2 among females, the rate for males exceeding by 0·8 per 1000, and that for females by 1·2 per 1000, the respective mean rates in the corresponding quarters of the preceding ten years. Out of equal numbers living, the deaths of males were in the ratio of 108 to 100 deaths of females, the average proportion having been 111 to 100.

Urban and Rural Mortality.—In the registration districts and sub-districts which are taken to represent approximately the urban portion of England and Wales, the population of which is estimated to exceed nineteen millions, the death-rate last quarter was 20·9 per 1000; while in the remaining and chiefly rural population of about ten and a half millions, it was 18·2. These rates were respectively 0·7 and 1·4 per 1000 above the mean rates in the corresponding

quarters of the preceding ten years. Were the populations of the urban and rural portions of the country equal, the deaths last quarter in the urban to those in the rural would have been in the proportion of 115 to 100, the ratio in the preceding ten corresponding quarters having been 120 to 100.

In the thirty-three great towns, with an aggregate population estimated at about ten and a third millions, the death-rate last quarter was 22·6 per 1000, the rates in the several towns ranging from 15·0 in Halifax, 15·6 in Croydon, 17·5 in Huddersfield, and 17·6 in Portsmouth, to 24·2 in Manchester, 24·7 in Salford, 26·4 in Wolverhampton, and 28·1 in Liverpool.

In sixty-seven other large town districts the death-rate was 19·7 per 1000, or 2·9 per 1000 below the rate in the thirty-three great towns; while in the remainder of England and Wales, after excluding these 100 towns, the rate was 18·2.

Mortality at different Ages.—Of the 149,057 deaths registered last quarter, 32,921 were of infants under one year of age, 71,180 of persons aged between one year and 60 years, and 44,956 of persons aged 60 years and upwards.

The mortality of infants under one year of age was in the proportion of 151 to 1000 registered births, being 5 per 1000 above the mean proportion in the preceding ten corresponding quarters. The proportion did not exceed 80 per 1000 births in Dorsetshire, 92 in Berkshire, 93 in Wiltshire, or 96 in Westmorland, but ranged upwards in the other registration counties to 173 in London, 176 in Staffordshire, and 181 in Lancashire. In the thirty-three great towns the mean proportion was 174 per 1000 births, exceeding that in the whole of England and Wales by 23 per 1000; the proportions in these towns ranged from 127 in Portsmouth, 137 in Halifax, 139 in Gateshead, and 141 in Huddersfield, to 197 in Liverpool, 198 in Oldham, 225 in Wolverhampton, and 229 in Blackburn. In sixty-seven other large town districts the infant mortality averaged 161 per 1000 births, the proportions ranging from 75 in Hastings, 83 in Bournemouth, and 86 in Eastbourne, to 223 in Grimsby, 226 in Bury, 249 in Devonport, and 269 in Darwen. Excluding these 100 towns, the infant mortality in the remainder of the country was 131 per 1000 births.

The mortality of persons aged between one year and 60 years was at the annual rate of 10·6 per 1000 of the estimated population at this group of ages, being 0·4 per 1000 above the average rate in the preceding ten corresponding quarters. In the thirty-three great towns the mean rate was 12·9 per 1000, the rates in the several towns ranging from 7·6 in Croydon and in Halifax, to 14·1 in Manchester, 14·2 in Salford, 14·3 in Wolverhampton, and 17·6 in Liverpool.

Among persons aged 60 years and upwards the mortality was at the annual rate of 81·2 per 1000 of the estimated population at this group of ages, exceeding the average rate in the preceding ten corresponding quarters by 9·1 per 1000. In the thirty-three great towns the rates averaged 91·1 per 1000, being no higher than 58·9 in Norwich, 64·4 in Croydon, 70·1 in Brighton, and 70·3 in Plymouth, but reaching 110·1 in Salford, 111·1 in Birkenhead, and 116·6 in Bolton.

Compared with the respective mean rates in the preceding ten corresponding quarters, the mortality of infants under one year of age in England and Wales showed an excess of 3·4 per cent., that of persons aged between one year and 60 years an excess of 3·9 per cent., and that of persons aged 60 years and upwards an excess of no less than 12·6 per cent.

Zymotic Diseases.—The 149,057 deaths included—

3077	attributed to	diphtheria,
2591	„	whooping-cough,

Thus 15,069 deaths were ascribed to these zymotic causes, giving an annual rate of 2·01 per 1000 population, the mean rate from these diseases in the preceding ten corresponding quarters having been 2·06. In the thirty-three great towns the death-rate from these diseases was 2·55 per 1000, in sixty-seven other large town districts it was 2·10, and in the remainder of the country it was 1·63.

The deaths referred to *diphtheria* numbered 3077, and were in the annual proportion of 0·41 per 1000 population, the average rate in the preceding ten corresponding quarters having been 0·21. In registration counties the death-rates from this disease were below 0·15 per 1000 in Staffordshire, Cumberland, Bedfordshire, Nottinghamshire, Derbyshire, and Northumberland, but rose to 0·71 in Oxfordshire, 0·72 in Cambridgeshire, 0·73 in Essex, and 1·01 in London. In the thirty-three great towns the rate was 0·55. No death from this disease was registered in Swansea, Bolton, or Huddersfield, and the rate did not exceed 0·04 in Derby, nor did it exceed 0·06, either in Blackburn or in Sunderland; but the rate in the other towns ranged upwards to 0·40 in Gateshead, 0·42 in Norwich and in West Ham, 0·81 in Croydon, and 1·01 in London. In sixty-seven other large town districts the rate was 0·25, while in the remainder of the country it was 0·36. Among sub-districts in which diphtheria appears to have been specially prevalent were Guildford, Folkestone, Princes Risborough, Bampton, Thrapston, Stanway, Halstead, Lavington, Warminster, Barnstaple, Ilfracombe, Shebbear, St. Agnes (Truro), Hinckley, and Tattershall. In Guildford, Lavington, and Hinckley, the disease has also been prevalent in the preceding quarter.

Under *whooping-cough* 2591 deaths were registered, the annual mortality per 1000 population being 0·35, against a mean rate of 0·33 in the preceding ten corresponding quarters. No death from this disease was recorded either in Oxfordshire, in Huntingdonshire, or in Westmorland, and the rate per 1000 population was below 0·10 in Wiltshire, Dorsetshire, Herefordshire, and Shropshire, but in the other registration counties the rates ranged upwards to 0·63 in Devonshire, 0·69 in Essex, and 1·01 in Cumberland. The mean rate in the thirty-three great towns was 0·53 per 1000, the rates being below 0·10 per 1000 in Preston and in Halifax, but rising in the other towns to 0·93 in Birkenhead, 0·94 in Hull, 1·09 in Bolton, 1·46 in West Ham, and 1·71 in Plymouth. In sixty-seven other large town districts the rate was 0·31 per 1000, while in the remainder of the country it was 0·23. Among sub-districts in which the mortality from whooping-cough was excessive were Wells, Stoke, St. Austell, Workington, and Whitehaven.

The deaths attributed to *diarrhœa* numbered 2491, and corresponded to an annual rate of 0·33 per 1000, the mean rates in the preceding ten December quarters having been 0·41. No death from this disease was recorded in Huntingdonshire or in Rutlandshire; in the other registration counties the rates varied from 0·13 per 1000 in Dorsetshire, 0·14 in North Wales, and 0·16 in Surrey and in Cambridgeshire, to 0·49 in Staffordshire, 0·52 in Warwickshire and in Lancashire, 0·54 in the East Riding of Yorkshire, and 0·57 in Durham. In the thirty-three great towns the mean death-rate from this disease was 0·39, the rates in the several towns ranging from 0·12 in Huddersfield, 0·13 in Halifax, 0·14 in Croydon, and 0·20 in Brighton, to 0·76 in Salford, 0·92 in Gateshead, and 1·04 in Blackburn. In sixty-seven other large town districts the rate was 0·40 per 1000, while in the remainder of England and Wales it was 0·27.

To "*fever*," including typhus, enteric fever, and simple or ill-defined forms of continued fever, 2490 deaths were attributed: these deaths corresponded to an annual rate of 0·33 per 1000 population, the average of the rates in the preceding ten December quarters having been 0·26 per 1000. No death from fever was recorded in the small county of Rutland, and the rate was below 0·10 in Berkshire, Oxfordshire, Wiltshire, Shropshire, Cumberland, and Westmorland, but ranged upwards in the other registration counties to 0·45 in Northumberland, 0·46 in Lincolnshire, 0·47 in Lancashire, 0·60 and 0·88 respectively in the North and East Ridings of Yorkshire, and 1·17 in Durham. In the thirty-three great towns the mean rate was 0·36, but while the rate did not exceed 0·04 in Bristol, 0·05 in Plymouth, and

0·09 in Halifax, it rose in the other towns to 0·62 in Gateshead, 0·77 in Liverpool, 0·79 in Salford, 0·98 in Hull, and no less than 1·76 in Sunderland, this town also having shown the highest death-rate from "fever" in the previous quarter. In sixty-seven other large town districts the rate was 0·50, while in the remainder of the country it was 0·27. In the urban sanitary district of Worthing, where 44 and 118 deaths from "fever" had been registered in the June and September quarters respectively, 8 deaths were recorded last quarter. Among sub-districts in which this disease was specially prevalent were Great Grimsby, St. Helens, Pemberton, and Pocklington, besides Barnsley, Bishop Auckland, Easington, and Houghton-le-Spring, in which the mortality from this cause had also been excessive in the quarter.

The deaths ascribed to *scarlet fever* numbered 2098, the annual mortality being in the proportion of 0·28 per 1000 population, against a mean rate in the previous ten corresponding quarters of 0·33. The death-rate from this disease did not exceed 0·09 in Warwickshire, 0·10 in the North Riding of Yorkshire, 0·12 in Wiltshire, or 0·13 in Lincolnshire, but rose in the other registration counties to 0·53 in Leicestershire and in Cumberland, 0·58 in Nottinghamshire, and 0·93 in Cornwall. In the thirty-three great towns the rate was 0·35 per 1000 population, but while no death from this disease was recorded in Blackburn, and the rate was under 0·10 per 1000 in Brighton, Derby, Birkenhead, Oldham, Halifax, and Gateshead, it rose in the other towns to 0·69 in Nottingham, 0·72 in Liverpool, 0·81 in Wolverhampton, and 0·82 in Burnley. In sixty-seven other large town districts the rate was 0·23, while in the remainder of the country it was 0·25. Among sub-districts in which scarlet fever was specially prevalent were Camborne, Penzance, Darlaston, Hindley, and Pemberton; in Penzance the disease had shown still more excessive mortality in the preceding quarter.

The deaths registered under the heading *measles* numbered 2007, and were in the annual proportion of 0·27 per 1000 population, the mean rate in the preceding ten corresponding quarters having been 0·49. No death from this disease was registered in Huntingdonshire, Cambridgeshire, Rutlandshire, or Westmorland, and the death-rate did not reach 0·05 per 1000 in Sussex, Buckinghamshire, Bedfordshire, Dorsetshire, Devonshire, or Herefordshire; it rose, however, in the other registration counties to 0·47 in Durham, 0·50 in Oxfordshire, 0·58 in Norfolk, 0·83 in Northamptonshire, and 1·47 in Monmouthshire. In the thirty-three great towns the mean rate was 0·30 per 1000 population, but while no death from this disease was recorded in Brighton, Plymouth, Derby, Bolton, or Halifax, and only one each in Croydon, Cardiff, Swansea, Preston, Bradford, and Hull, the rate reached 0·52 per 1000 in Wolverhampton, 0·54 in Sheffield, 0·56 in Burnley, and 2·08 in Norwich. In sixty-seven other large town districts the rate was 0·34, while in the remainder of the country it was 0·23. Among sub-districts showing excessive mortality from measles were Henley, St. Giles and All Saints (Northampton), Longton, Dalton, Skipton, Pontefract, Darfield, South Shields, Aberystruth, Margam, and Ruabon; in Dalton and in Margam the mortality from this cause had also been excessive in the preceding quarter.

The deaths from *small-pox*, which had steadily risen in successive quarters from 86 in the September quarter of 1892 to 519 in the June quarter of 1893, and then declined in the following quarter to 244, increased again last quarter to 315. Of these 315 deaths, 19 occurred in London and its hospitals outside the metropolitan area, 14 in Essex (including 13 in the district of West Ham), 23 in Gloucestershire, 68 in Staffordshire, 45 in Warwickshire, 10 in Derbyshire, 86 in the West Riding of Yorkshire, and 11 in Durham. Deaths from this disease were registered in thirteen of the thirty-three great towns, the numbers reaching 19 in London, 12 in West Ham, 15 in Bristol, 43 in Birmingham, and 62 in Bradford. Among districts and sub-districts in which small-pox was specially prevalent were Walsall, West Bromwich, Chesterfield, and Wakefield.

The following Table shows the relative mortality from each of the above-mentioned zymotic diseases in England and Wales, in the thirty-three great

CERTIFICATION OF CAUSES OF DEATH.—Of the 149,057 deaths in England and Wales, the causes of 136,644, or 91·7 per cent., were duly certified by registered medical practitioners, and the causes of 8558, or 5·7 per cent., by coroners after inquest; while the causes of the remaining 3855, or 2·6 per cent., were not certified, the mean proportion of uncertified deaths in the previous ten corresponding quarters having been 3·2 per cent. In registration counties the proportions of uncertified deaths ranged from 0·5 per cent. in Monmouthshire, 0·7 in Middlesex, 0·9 in London and in Surrey, and 1·0 in Wiltshire, to 5·0 per cent. in Warwickshire, 5·8 in Westmorland, 6·4 in North Wales, and 7·0 in Herefordshire and in Huntingdonshire. In the thirty-three great towns the mean proportion was 1·8 per cent.; but while no uncertified death was registered in Croydon, and the percentage did not exceed 0·2 in Plymouth, 0·5 in Portsmouth and in Wolverhampton, and 0·6 in Norwich and in Derby, it reached 4·8 in West Ham, 5·8 in Birmingham, and 6·3 in Preston.

VIOLENT DEATHS.—The number of deaths referred to different forms of violence was 4529, giving an annual rate of 0·60 per 1000 population, the mean rate in the preceding ten corresponding quarters being also 0·60 per 1000. In registration counties the lowest rates were 0·18 per 1000 in Rutlandshire, 0·32 in Berkshire and in Huntingdonshire, 0·36 in Dorsetshire, and 0·38 in Bedfordshire, while the rates in the other counties ranged upwards to 0·74 in the East Riding of Yorkshire, 0·76 in Lancashire, and 0·80 in Northumberland. In the thirty-three great towns the average rate per 1000 was 0·75, the rates in the several towns ranging from 0·23 in Norwich, 0·34 in Brighton, and 0·37 in Croydon, to 0·90 in Manchester, 1·14 in Wolverhampton, and 1·74 in Liverpool.

INQUESTS.—Inquests were held respecting 8558, or 5·7 per cent., of the total deaths registered, the mean proportion in the preceding ten corresponding quarters having been 5·6 per cent. In the thirty-three great towns the proportions averaged 6·9 per cent., the lowest being 2·7 in Birmingham, 3·5 in Sheffield, and 3·6 in West Ham and in Brighton, the proportions in the other towns rising to 8·5 in Wolverhampton, 8·9 in Sunderland, and 9·6 in Derby.

DEATHS IN PUBLIC INSTITUTIONS.—Of the total deaths registered in England and Wales, 18,523, or 12·4 per cent., occurred in workhouses, hospitals, and public lunatic asylums, the proportion in the preceding ten corresponding quarters having been 10·9 per cent. In the thirty-three great towns the proportion of deaths in such institutions was 19·2 per cent., the proportions in the several towns varying from 5·0 in Burnley, 6·7 in Gateshead, 6·8 in Preston, and 7·2 in West Ham, to 20·2 in Wolverhampton, 20·3 in Liverpool, and 25·9 in London.

Edinburgh, Glasgow, and Dublin.—The death-rate was 22·3 per 1000 in Edinburgh and also in Glasgow, and 27·4 in Dublin, against 23·2 in London.

Colonial and Foreign Cities.—From a summary of the Weekly Returns with which the Registrar-General is favoured by various local authorities abroad, it appears that the deaths last quarter in thirty-one Colonial and Foreign cities, with an aggregate population of about nineteen and a half millions, corresponded to an annual rate of 22·6 per 1000 persons living.

In twenty-two European cities the mean death-rate was 21·7 per 1000, as compared with 22·6 in the thirty-three great English towns. In Paris the rate was 19·0, in Berlin 19·4, and in Vienna 23·2, which was also the rate in London. Among the European and American cities the lowest death-rates were 16·5 in Brussels, 17·5 in Amsterdam, 17·6 in Copenhagen and in Brooklyn, and 17·8 in Christiania; while the highest were 28·0 in Prague, 28·5 in Trieste, 28·7 in Breslau, and 30·4 in Moscow. In the Indian and Egyptian cities the rates were 25·7 in Bombay, 31·4 in Calcutta, 39·1 in Madras, 39·1 in Alexandria, and 45·5 in Cairo. In proportion to population the mortality from *measles* was highest in Trieste, The Hague, and Munich; from *scarlet fever* in Stockholm, Moscow, and Copenhagen; and from *whooping-cough* in Cairo, Breslau, and Alexandria. *Diphtheria* was excessively fatal in the German, Austrian, and American cities; "*fever*" in the Indian and Egyptian cities; and *diarrhœal diseases* in the Egyptian cities, and to a less extent in the Indian cities and in most of the European cities.

The Year 1893.

According to the quarterly returns furnished by the local registrars, 914,305 births and 569,997 deaths were registered in England and Wales during the year 1893. The natural increase of population, by excess of births over deaths, was therefore 344,308, the average annual natural increase in the preceding five years having been 341,718.

The returns issued by the Board of Trade show that 307,750 emigrants embarked during the year, for places beyond Europe, from the various ports in the United Kingdom at which emigration officers are stationed. Distributing proportionally 3729 whose nationality was not stated, the emigrants who were natives of the United Kingdom numbered 212,287, including 136,724 English, 23,225 Scotch, and 52,338 Irish, while those of foreign origin numbered 95,463. The number of English emigrants was almost identical with that for the previous year, when it was 136,725, while the numbers of Scotch and Irish emigrants were 2·9 and 1·4 per cent. respectively fewer than in 1892.

The birth-rate in England and Wales in 1893 was 30·8 per 1000 population, which, though slightly higher than that in 1892, was 3·4 per cent. below the average in the ten years 1883-92.

The death-rate, which had had been 19·5, 20·2, and 19·0 per 1000 in the preceding three years, was 19·2 per 1000 last year, corresponding with the mean rate in the ten years 1883–92.

The 569,997 deaths in 1893 included 145,306 of infants under one year of age, 268,442 of persons aged between one year and 60 years, and 156,249 of persons aged 60 years and upwards. The mortality of infants under one year of age to 1000 registered births was 159, the mean proportion in the ten years 1883–92 having been 144. The death-rate among persons aged between one year and 60 years was 10·0 per 1000 estimated to be living at this group of ages, and that among persons aged 60 years and upwards was 71·1 per 1000.

The deaths registered included 28,755 from diarrhœa, 10,764 from measles, 9750 from whooping-cough, 8918 from diphtheria, 6988 from "fever," 6869 from scarlet

fever, and 1455 from small-pox. Thus 73,499 deaths were attributed to these zymotic diseases, corresponding to a rate of 2·47 per 1000 population, against 1·90 and 2·00 per 1000 in the preceding two years. The deaths from diphtheria were more numerous than in any previous year on record, and those from diarrhœa than in any year since 1880, while the mortality from "fever" and from small-pox was also unusually high.

The deaths in the year included 32,839 cases in which inquests were held, or 5·8 per cent. of the total; and in 14,336 cases, or in 2·5 per cent. of the total, the causes were not certified either by registered medical practitioners or by coroners. The proportion of inquest cases and of uncertified deaths had been 5·7 and 2·7 per cent. respectively in 1892.

To different forms of violence 18,753 deaths were referred, being in the proportion of 0·63 per 1000 population, against 0·67 and 0·65 per 1000 in the preceding two years.

The foregoing statistics for the year 1893 are derived from returns furnished quarterly by the local registrars, and are subject to revision when the causes of death and other details shall have been finally classified and tabulated for publication in the Registrar-General's Fifty-sixth Annual Report, now in course of preparation.

[a] The *Registration* or *Union Counties* consist of groups of Registration Districts, which are generally co-extensive with the Poor L
Unions. A District which extends into two or more Geographical Counties is included entirely in that Registration County in which
principal town of the district, or the greater part of the population, is located. The boundaries of Registration or Union Counties therefore di
more or less from the boundaries of Geographical Counties.

[b] The averages of Marriages and Births are given only for the Eleven Divisions and for Registration Counties.

[c] See page 14, note b.

[a] The *Registration Districts*, 633 in number, are collections of contiguous Parishes or Places, combined for purposes connected with the Registration of Births, Deaths, and Marriages, and are nearly always identical with the Poor Law Unions of the same names; they are here arranged topographically under the Registration Counties.

[b] These areas, revised by the Ordnance Survey Department, are the same as those published in the Census Report of 1891. They do not include space occupied by foreshore or tidal waters of rivers and creeks.

[c] See page 14 note [b].

[a] The *Registration Sub-districts* (2107 in number) are sub-divisions of the *Registration Districts* in which the Births and Deaths are registered by Registrars severally appointed for that purpose. The letter *W* denotes that the Sub-district contains within its limits a Workhouse belonging to the District or Union; *w* indicates Workhouse Establishment receiving inmates from other Districts than the one in which it stands; *H* indicates Hospital or Infirmary; and *L* Lunatic Asylum.

[b] For London, the numbers of Births and Deaths, as well as the details given under "Infants under 1 year of age" and the twelve subsequent headings in this Table, are derived from the Weekly Returns made by the Registrars, and relate to 13 weeks ending 30th Dec. 1893.

The atmospheric pressure was below its average from the 1st to the 9th, and generally above from the 10th to the 31st. The fall of rain was above its average at most stations. The S. and W. winds were prevalent. It was a very fine autumnal month.

The weather in November was cloudy and cold, with frequent changes both of temperature and atmospheric pressure. The temperature of the air was generally below its average till the 27th, being on several days as much as 6°, 7° and 8° below; then changed to mild weather, and above its average from the 28th to the 30th; the mean daily excess for these three days being 7°·3. The atmospheric pressure was below its average from the 1st, to the 5th, and from the 14th to the 19th, being as much as 0·79 in. and 0·70 in. below on the 17th and 18th, respectively; and generally above its average on all other days. On the 18th and 19th a severe gale of wind from the N. and N.W., accompanied by a fall of snow, was experienced in most parts of England, doing much damage and causing many shipwrecks and great loss of life. The fall of rain was a little below the average about London and at the Midland stations, but generally above at the Northern stations.

The weather in December was dull and mild with the exception of the 1st to the 5th and of the 29th to the 31st which were cold. The temperature of the air was below its average from 1st to the 5th, and from the 29th to the 31st, being particularly so on the 2nd, 3rd, and 31st days when it was as much as 11°·4, 10°·4, and 10°·3, respectively, below, and was generally above the average from the 6th to the 28th; being as much as 10°·8 above on the 13th. The atmospheric pressure was below the average from the 7th to the 14th, and from the 19th to the 22nd, being particularly so on the 13th and 20th when it was as much as 0·80 in., and 1·15 inch, respectively, below; and was generally above the average on all other days. On the 11th, 12th, and 13th a severe gale of wind and heavy fall of rain was experienced all over England, accompanied at several places in the south by thunder and lightning, doing much damage and causing loss of life on both land and sea. The fall of rain was a little above its average at all stations.
